

## **I&M Committed to Helping Hoosier Businesses Achieve Energy Efficiency**

As we enter the 2021 construction season, building owners, developers and architects can continue to turn to I&M for ways to save energy.

I&M continues to offer [Custom Incentives](#) and [Prescriptive Rebates](#) to help our business customers save energy and improve your bottom line.

The success of I&M and our customers can be measured by the staggering amount of electricity our energy-efficiency programs have helped customers save over the past decade: more than *3.8 billion* kilowatt hours.

I&M and our valued customers have achieved the most cost-effective goals of our Energy Efficiency programs. Although at one time they were considered innovative, many now-common Energy Efficiency measures such as converting to LED lights-have become much more readily available and affordable. Given the changes, I&M and the Indiana Office of Utility Consumer Counselor have agreed that I&M's Energy Efficiency programs should evolve to better fit the future energy needs of our customers while operating in a cost-effective manner and continuing to help you save energy.

As a result of the Indiana Utility Regulatory Commission's recent order, as of March 31, 2021, I&M is discontinuing the Small Business Direct Install Program.

Thank you for helping reduce energy use, and we look forward to continuing to serve your energy needs – today, tomorrow and into the future.
