

## **I&M Revising Energy Efficiency Programs for Hoosier Customers**

I&M and our valued customers have achieved the most cost-effective goals of our Energy Efficiency programs – saving more than *3.8 billion* kilowatt hours (kWh) of electricity over the past decade. Although at one time they were considered innovative, now common Energy Efficiency measures such as converting to LED lights have become much more readily available and affordable.

Given the changes, I&M and the Indiana Office of Utility Consumer Counselor have agreed that I&M's Energy Efficiency programs should evolve to better fit the future energy needs of our customers while operating in a cost-effective manner and continuing to help you save energy.

As a result of the Indiana Utility Regulatory Commission's recent order, as of March 31, I&M is discontinuing the following Energy Efficiency services: Residential Lighting, Appliance Recycling, Weatherproofing, Home Energy Reports, Online Energy Checkup and Schools Energy Education.

However, we still offer several residential Energy Efficiency solutions for consumers and encourage them to take advantage of these offerings, including [HVAC and Energy-saving Products](#), [Income Qualified Home Energy Checkup](#) and [Residential New Construction](#).

Thank you for helping reduce energy use, and we look forward to continuing to serve your energy needs – today, tomorrow and into the future.
