

Free Weatherstripping to Help You Reduce Energy Costs

Exterior guestroom doors can be a significant cause of high energy bills. Air leaks and conduction make the HVAC system run longer, using more power, to keep the room comfortable. If the exterior doors of your guestrooms are old, uninsulated, improperly installed, or improperly air-sealed – I&M can help you save energy and reduce costs with FREE weatherstripping.

BENEFITS OF WEATHERSTRIPPING

Weatherization upgrades such as exterior door weatherstripping can help your property be more energy efficient and provide up to a 10% savings on your annual energy bills.

Weatherstripping helps:

- Lower heating and cooling costs by reducing air loss
- Minimize air leaks when the door is closed
- Protect against air drafts
- Protect insulation from damage caused by air leaks

ENERGY SAVING AS EASY AS 1, 2, FREE

Before installing weatherstripping in a motel, air leaks and ventilation should be assessed to ensure adequate indoor air quality. Contact us to schedule your no-cost assessment and installation of weatherstripping.

1. Schedule onsite eligibility consultation.
2. Schedule installation.
3. Have weatherstripping installed – free of charge.

Contact field specialist **Kyle Dupree** to schedule an appointment.
