

Compressed Air Leak Study and Repair

Compressed air leak study and repair—also sometimes referred to as “find and fix”—is a process that identifies and repairs air leaks. The “find” is a study of the whole compressed air system to identify leaks and the “fix” is any prescribed repairs to minimize energy loss at the point of the leak.

BENEFITS

- Reduced energy waste
- Increased employee safety
- Cost savings

STEPS TO PARTICIPATE

1. Contact one of our experienced Trade Allies to schedule your compressed air leak study.
2. During the on-site inspection, qualified leaks will be identified and repaired within a timeframe that will not conflict with business demands.

WHAT ARE THE COSTS OF LEAKS IN YOUR SYSTEM?

Type of Leak	Approximate Cost per Year
Cannot be felt or heard	\$100
Can be felt but not heard	\$400
Can be felt and heard	\$700

Costs are calculated at a rate of \$0.05 per kWh under the assumption of continuous use with an efficient compressor.
